## Storm Water Inspection Software System

### Highlights

#### Storm Water Compliance

Storm Water Inspection Software System (S.W.I.S.S.) is an important tool for managing construction site storm water inspections and NPDES Phase II permit requirements.

#### Storm Water Inspection Software System

Tracking, managing, and storing necessary data to meet federal regulations can be a difficult task.

Without the aid of technology record keeping, paperwork, data entry, and inspection reports are complex and time consuming to manage.

With S.W.I.S.S. people can inspect and digitally document erosion and sediment control information from active construction sites.

Storm Water Inspection Software System helps manage construction site inspections and protect water resources.

#### Manage Information Lists

- Construction Site Owners
- Vendor/Contractor Contact Lists
- NPDES and Local Permits
- Inspector Contact List
- Best Management Practices (BMPs)

#### Manage Inspection Data

- Quickly generate digital site inspection forms.
- Easily enter data on pre-populated drop-down menus
- Record effective/not effective BMP information
- Import location specific digital pictures of BMPs
- Document needed maintenance
- Add work completion dates for installation
- Assign contractors for repairs or installation
- Prepare cost estimates

#### Generate reports and follow up

- Vendor work orders
- Site owner reports
- Construction site inspection summaries
- Time documentation

#### Schedules

- Adds next inspections to master calendar
- Documents installation and repair completion dates
- Tracks inspection time by site and inspector
- Displays non-completed repairs by site

#### Invoices

- Efficiently mark completed inspections for invoicing
- Create invoice for each site owner for the selected inspections
- Print or Email invoices to single or batch site owners
- Manage created, sent, paid invoices and post as paid to inspection reports
